## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/13/2008 has been entered.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1, 4-9, 12, 13, 15, 17, 22 and 34-40 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claims contain subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor, at the time the application was filed, had possession of the claimed invention. The claims contain subject matter wherein the fabric may be formed using only two guide bars while an elastomeric or stretch yarn forces the stitch evaded yarn to the second side of the fabric, but the current specification does not appear to describe said embodiment. Rather, the current specification appears to teach that at least three guide bars are necessary because the third bar is responsible for gathering and collapsing the fabric in both length and width to force the middle bar yarn to the surface (see page 24, lines 12-15 of the current specification).

Art Unit: 1794

4. Claims 1, 4-9, 12, 13, 15, 17, 22 and 34-40 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not fully enabling. Three guide bars appear to be critical or essential to the practice of the invention, but are not necessarily included in the claims. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). As stated above, the current specification teaches that at least three guide bars are necessary because the third bar is responsible for gathering and collapsing the fabric in both length and width to force the middle bar yarn to the surface (see page 24, lines 12-15 of the current specification).

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claims 1, 4-9, 12, 13, 15, 17, 22 and 34-40 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The independent claims recite the limitations "the front stitches" and "the stitch evaded yarn." There is insufficient antecedent basis for these limitations in the claims. In addition, the specification appears to teach that the elastomeric or stretch yarn is incorporated in the back of the fabric rather than a front (page 24, lines 14-17).

The independent claims recite "multi-directional stretch performance fabric." The word "performance" renders the claims indefinite because it is not clear what property and/or ability is being claimed.

Claims 1 and 37 recite a "stretch performance fabric" and "two-sided single layer stretch warp knit fabric." The word "stretch" renders the claims indefinite because it is not clear if the fabric is stretched or stretchable or other.

***Response to Arguments***

7. Applicant's arguments have been considered but are moot in view of the new grounds of rejection.
